

# The mobile solution to your security needs

fonecam™

- **Remote accessibility - authorized users can access and view images remotely at any time via desktop PC's and/or mobile handsets**
- **Cost effective - can integrate to your existing analog system or an IP based solution**
- **Highly flexible – with IP connectivity the system can be enhanced with the addition of multiple camera locations and extra storage capacity to meet future needs**
- **Highly mobile – can be set up in specific locations in a very short period of time**

Fonecam is the Justfone range of remote surveillance products offering cost effective and highly flexible solutions for the capture, distribution and access of remote monitoring images whether wired connectivity is available or not.

Fonecam offers a high quality, user-friendly system which can enhance existing security applications or be used to introduce a remote monitoring system to address specific needs such as reducing crime in a particular area.

## Image Capture and Distribution

Fonecam is optimised for use with the Axis range of IP cameras including models with remote controlled PTZ (Pan/Tilt/Zoom), wireless LAN connectivity and infra-red illuminated night vision.

For example, a remote PTZ camera could have its position or zoom altered remotely by a simple interface on a mobile phone or web browser before an image is captured.

Axis network cameras are equipped with the processing power not only to capture and present the images but also to digitally manage and compress them for network transfer.

The application can be tailored such that images can be captured at pre-defined intervals, on request from an authorised user or by a local trigger such as activation of a motion sensor or a door/gate opening. Images can be forwarded from the camera to remote servers via FTP, HTTP or e-mail. Notification of image capture and actual images can be forwarded via WAP PUSH, SMS, MMS or e-mail.
